

Online Book Store Data Analysis Using SQL

DARPIT KAPOOR

Introduction

- The Online Book Store project is designed to manage and analyze book sales data
- It includes three main tables: **Books**, **Customers**, and **Orders**
- SQL is used to perform data analysis and extract meaningful insights
- This project helps understand customer behavior, sales trends, and inventory management

Project Overview

- The database is structured into three key tables: **Books**, **Customers**, and **Orders**
- Each table is connected using **primary** and **foreign keys**
- Books table stores product details like title, price, and stock
- Customers table contains user information such as name, city, and country
- Orders table records transactions including quantity and total amount

BOOKS

ORDERS

CUSTOMERS

Retrieve Fiction Books

Filters all books from the Fiction genre for targeted analysis.

SQL Query

```
SELECT * FROM BOOKS
WHERE GENRE='FICTION'
```

Filter Rows:			Edit: 			Export/Import
TITLE	AUTHOR	GENRE				
Horizontal background throughput	Billy Lopez	Fiction				
Automated transitional hardware	Nicole Smith	Fiction				
Adaptive mobile toolset	Andrew James	Fiction				
Balanced grid-enabled architecture	Christian Morales	Fiction				
Stand-alone clear-thinking extranet	Craig Dominguez	Fiction				

SQL Query

Filter Rows: Edit:    Export/Import:   Wrap				
TITLE	AUTHOR	GENRE	PUBLISHED_YEAR	PRICE
Proactive system-worthy orchestration	Robert Scott	Mystery	1907	49.98

Total Stock Available

Calculates the total number of books available in stock using the **SUM()** function.

25056
TOTAL STOCK

SQL Query

```
SELECT SUM(STOCK) AS  
TOTAL_STOCK  
FROM BOOKS;
```

Result Grid			
	TOTAL_STOCK		
	25056		

Orders Above \$20

“Filters orders with a total amount greater than \$20...”

SQL Query

```
SELECT *  
FROM Orders  
WHERE Total_Amount > 20;
```

CUSTOMER_ID	BOOK_ID	ORDER_DATE	QUANTITY	TOTAL_AMOUNT
297	137	2024-06-17	5	131.65
140	48	2023-08-26	1	24.70
152	406	2024-03-10	2	71.58
328	272	2023-04-25	10	51.60
53	233	2024-09-28	6	62.34

Customers Ordering More Than 1 Book

Identifies customers who ordered more than **one book** using a JOIN between Customers and Orders.

SQL Query

```
SELECT DISTINCT c.*  
FROM Customers c  
JOIN Orders o ON  
c.Customer_ID=o.Customer_id  
WHERE o.Quantity > 1;
```

CUSTOMER_ID	NAME
2	Melissa Curtis
6	Patrick Rivera
7	Michelle Guzman
8	Lauren Andrews
10	Timothy Moore
11	Brittany Young

Total Revenue Generated

₹ 75628.66

SQL Query

```
SELECT  
SUM(Total_Amount) AS  
Total_Revenue  
FROM Orders;
```

Calculates total revenue generated from all orders using the **SUM()** function.

	TOTAL_REVENUE
▶	75628.66

Most Frequently Ordered Book

Finds the most ordered book using
COUNT(), GROUP BY, and sorting.

SQL Query

```
SELECT b.Title, COUNT(o.Book_ID)
AS Order_Count
FROM Orders o
JOIN Books b ON
o.Book_ID = b.Book_ID
GROUP BY b.Title
ORDER BY Order_Count DESC
LIMIT 1;
```

**“FUNCTION-BASED mobile
neural-net”**

MOST ORDERED BOOK

BOOK_ID	TITLE	MOST_ORDERED_BOOK
31	Function-based mobile neural-net	4

Most Valuable Customer

Identifies the top customer based on total spending using SUM() and GROUP BY.

SQL Query

```
SELECT c.Customer_ID, c.Name,  
SUM(o.Total_Amount) AS Total_Spent  
FROM Customers c  
JOIN Orders o ON  
c.Customer_ID = o.Customer_ID  
GROUP BY c.Customer_ID, c.Name  
ORDER BY Total_Spent DESC  
LIMIT 1;
```

TOP CUSTOMER

“ALEXIS GALLEGOS”

₹ 1,398.90

CUSTOMER_ID	NAME	TOP_CUSTOMER
457	Alexis Gallegos	1398.90

Key Insights

These insights highlight key patterns in sales, customers, and inventory.

- **High-value orders** (> \$20) contribute significantly to overall revenue 💰
- A small group of customers are **repeat buyers**, indicating strong customer retention 👤
- The **most valuable customer** generates the highest revenue for the business ₹
- Certain books are ordered more frequently, showing **popular demand** trends 📚
- **Inventory analysis** helps identify stock availability and potential shortages 📦

Conclusion

- **SQL** helped analyze sales, customer behavior, and inventory data
- Identified high-value customers and most popular books
- Enabled data-driven decision making for business growth
- Demonstrated practical use of **SQL** in real-world scenarios

*“This project highlights the power of **SQL** in transforming raw data into meaningful insights”.*

THANK YOU
